JIBRAN ALI

Senior Full-Stack Software Engineer (Ruby on Rails, Node.js, TypeScript)
+92 334 4053659 | jibrann.ali@gmail.com | Lahore, Pakistan (Open to Relocate / Remote)
GitHub: https://github.com/half-blood-king

PROFILE

Senior Full-Stack Engineer with nearly 5 years of professional experience building and scaling Ruby on Rails applications on PostgreSQL, alongside production Node.js (NestJS) and TypeScript services and Next.js/React front ends. Experienced with AWS (Docker, ECS, CloudWatch), REST and GraphQL APIs, and integrations with external platforms including GitHub APIs. Reduced API latency 30–35%, scaled systems to 10x traffic, and built an AI governance platform using LLMs, RAG and MCP. Clear communicator who explains technical topics to teammates, stakeholders and customers in English, and who mentors engineers and reviews code for quality, security and best practices.

SKILLS

Backend: Ruby on Rails, Node.js, TypeScript, NestJS, REST APIs, GraphQL, Sidekiq, background jobs

Databases & Storage: PostgreSQL, pgvector, Redis, query optimization, indexing, object storage (AWS S3)

Cloud & Infrastructure: AWS, ECS, Fargate, S3, SES, CloudWatch, Docker, CI/CD, GitHub Actions, Cloudflare Workers, edge

Frontend: HTML, CSS, SASS, Next.js (App Router), React, React Server Components, TypeScript, Laravel, WordPress

Integrations & Version Control: GitHub APIs, Git, Selling Partner API, third-party platform integrations, Stripe

Security & AI: LLM integrations, RAG, MCP, guardrails, Portkey, Ollama, OpenAI, Gemini, pgvector, CNN image classification, ABAC, ReBAC, SpiceDB, Microsoft Entra, JWT, code review

EXPERIENCE

Senior Software Engineer — CodingCops (Software Consultancy) *Lahore | Apr 2022 – Present*

Embedded with client teams on long-term engagements; own features from database schema to UI, plus deployment and monitoring.

Doodles — Calendar and Scheduling Platform | May 2026 – Present

- Lead development of the My-Time module using Next.js (App Router), TypeScript, and React Server Components, owning component architecture, state management, API integration, and performance optimization.
- Build and consume REST and GraphQL APIs for teams and organizations, writing semantic HTML and maintainable CSS/SASS for the user interface.
- Develop integrations with external platforms, including GitHub APIs and other version control systems, to extend the product ecosystem.
- Work with Cloudflare Workers and edge infrastructure to improve performance and reliability on a rapid release cadence.
- Collaborate with backend and design teams and review peers' code to uphold quality, security, and best practices.

NextAgency | Apr 2022 – 2025

- Delivered end-to-end features across Ruby on Rails backends and React frontends for systems serving millions of requests; improved the scalability, reliability, and performance of the Rails application.
- Designed and optimized PostgreSQL data storage with indexing and Redis caching, cutting API latency 35% and database load 40%.
- Built Selling Partner API integrations and real-time campaign analytics, cutting API response time 35%.
- Next Agency (enterprise SaaS): built features for teams and organizations, including automation workflows, SES email campaigns via background jobs, and reporting dashboards with advanced filtering.
- Mentored junior developers, ran code reviews, and contributed to architecture decisions, explaining technical topics to engineers and stakeholders.

Perpetual Intelligence — AI Governance Platform | 2025 – May 2026

- Built an enterprise AI governance platform end to end (full-stack + platform work) across Node.js/TypeScript services and PostgreSQL.
- Developed fine-grained authorization: ABAC via Microsoft Entra and ReBAC via SpiceDB, governing access to models, tools, and data.
- Built MCP servers, the Villa RAG system (ingestion → embeddings → pgvector retrieval), and guardrails for LLM interactions.
- Integrated Portkey for LLM observability (tracing, latency, token/cost analytics) surfaced in governance dashboards.
- Built a security proxy over Claude Code for policy enforcement on AI coding-agent traffic; deployed Ollama for local inference.
- Owned DevOps on AWS: Docker, ECS, CI/CD, CloudWatch monitoring.

Laravel Instructor (Part-Time, Weekends) — NAVTTC (Government Training Program) *May – Aug 2025*

- Taught Laravel to students in a government-run NAVTTC program, explaining technical concepts clearly.

WordPress Intern — Zedmetrics *2020 | 3 months*

- Developed and customized WordPress websites using HTML and CSS.

EDUCATION

BS Computer Science — Bahria University, Lahore *2022 | CGPA 3.7/4.0*

Final Year Project: CNN mobile app classifying real vs. fake gemstones (4 types); built the dataset and model myself.
